Monell Chemical Senses Center Chooses Infradapt to Deliver Next-Generation Network and Telephony Solution.

PHILADELPHIA, Pennsylvania -- 2/28/2007 -- Infradapt, a leading regional technology vendor, today announces that Monell Chemical Senses Center has chosen Infradapt to deploy its next-generation data and voice network. Monell, situated in the academic heart of Philadelphia's University City Science Center was established in 1968 as the world's first scientific institute for multidisciplinary research on taste, smell and chemosensory irritation. It currently employs over 100 scientists and technicians, plus a small administrative staff.

"An expansion forced us to conclude our current telephony and network infrastructure would need to be enhanced or replaced. We chose Infradapt because of their expertise in voice-over-IP systems, network engineering, and the general attractiveness of their solution," stated Gregory Shaffer, Monell's Senior Manager of Information Systems.

Monell will be utilizing Infradapt's Enterprise Voice IMS (Infrastructure Management Solution), a fully-managed VoIP deployment, maintenance, and support solution for medium and large enterprises. In addition, their deployment will include a new fully-meshed redundant network core using Cisco switching technology.

"Monell is a university city institution and we look forward to working with them on this and other technology projects," stated Corey S. McFadden, Managing partner at Infradapt.
